

PRIMARY USE: Minimize bank erosion.

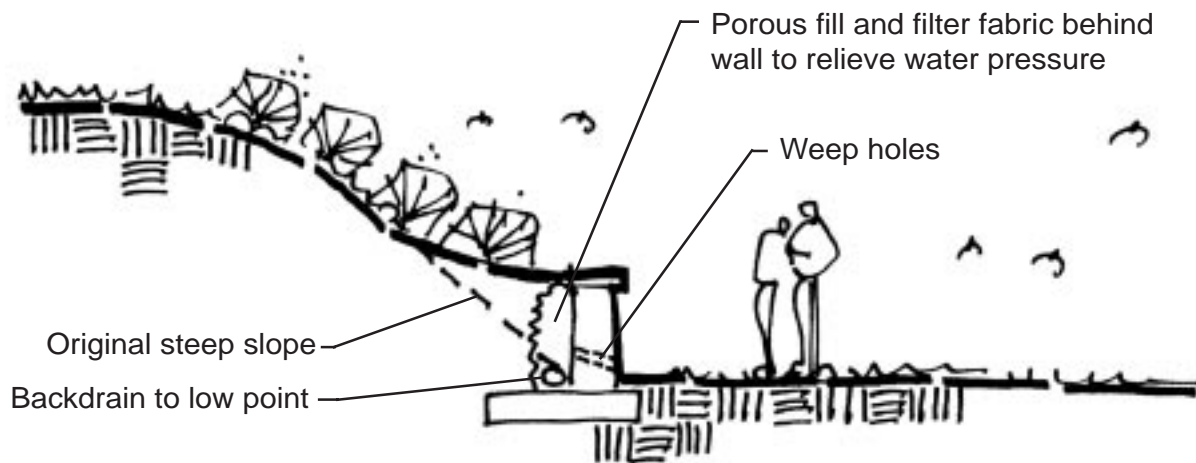

ADDITIONAL USES: Enhance aesthetics through the establishment of vegetation.

LOW WALL/SLOPE FACE PLANTINGS

What is it? A low retaining structure is built at the foot of a slope so that it is possible to flatten the slope above it and establish vegetation.

Purpose

Low retaining walls whose stability comes from its weight and/or mass can be modified in a variety of ways to fit nearly any condition or requirement.

**Low Wall / Slope Face Plantings
Section View**

Limitations

The wall itself is not screened.

Materials

Required materials are specific to each project and are dependent upon the type of wall which is built.

Installation

Installation guidelines are specific to each project and are dependent upon the type of wall which is built.
